A One function, two source locations

R10: financialHealthToolkit/CompaniesMod.py

```
78  def current_ratio(self):
79      try:
80          return self.current_assets / self.current_lia
81      except ZeroDivisionError:
82          return 0
```

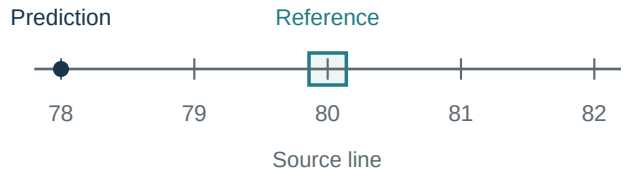
Baseline anchor: 78

Function definition

Reference span: [80, 80]

Returned calculation

B Frozen coordinate test



$$78 \notin [80, 80]$$

No primary match

The function contains the reference return; its anchor falls outside the reference span.
