## A Executable selector removed

EXP2-GOLD-049 | Partial

Selected source expression

```
runs_df["actual_output"].sum()
```

Captured native expression

```
runs_df[].sum()
```

Blanking string tokens removes the column key.

The selected sum is also an intermediate value in the scrap-rate calculation.

---

## B Requested output is not bound to expression selection

Four reference identities share one source region

| | |
|---|---|
| Availability | 041 |
| Performance | 042 |
| Quality | 043 |
| OEE | 044 |

Same captured expression

```
runtime / planned
```

Frozen verdicts

**041: Partial**

**042-044: Incorrect**

The availability expression is returned for availability, performance, quality and OEE.

---

## C Preceding control branch omitted

EXP2-GOLD-061 | Partial

```
if self.total_items == 0:
    return 0

return round(self.counted_items /
             self.total_items * 100, 1)
```

**Guard + fallback**
omitted

**Later expression**
selected
